Supplementary Figure S2. Predictive margins of child zero-dose (no RI) vaccination status with 95% CIs, by community type

Vaccinated: All surviving children aged 12–59 months who received at least one of the following routine immunisations (BCG, DPT1, DPT2, DTP3, MCV1).
Zero-Dose: All surviving children aged 12–59 months who received no routine immunisations (RI)
Outcome: Learning test - sum of all 3 (math, reading, writing) learning assessment scores
