Supplemental Figure S3. Predictive margins of unvaccinated status with 95% CIs, by community type

Vaccinated: All surviving children aged 12–59 months who received at least one recommended immunisation dose (BCG, DPT1, DPT2, DTP3, OPV1, OPV2, OPV3, MCV1).

Zero-Dose: Unvaccinated - All surviving children aged 12–59 months who received no recommended vaccines.

Outcome: Learning test - sum of all 3 (math, reading, writing) learning assessment scores
